### **Simflightronics Launches Safety Management Systems (SMS) Introductory Course for pilots**

**Deland, Florida, USA  
February 01, 2010**

Simflightronics announced today that it has launched a new Safety Management Systems (SMS) Introductory Course for Pilots, in partnership with Simulation Standards, their pilot training division. The course is offered to pilots from the local area flight training organizations, and is also offered through the long-distance learning program.

SMS can be defined as "a management system for integrating safety activities into normal day-to-day business practices." It is designed to help organizations integrate a systematic risk-based and process-oriented approach to managing safety. According to the FAA, "Safety Management System (SMS) is becoming a standard throughout the aviation industry worldwide. It is recognized by the Joint Planning and Development Office (JPDO), International Civil Aviation Organization (ICAO), and civil aviation authorities (CAA) and product/service providers as the next step in the evolution of safety in aviation."

President and CEO of Simflightronics, Capt. Mo Khwaja said that, "each individual, within every aviation organization has a role in preventing accidents. In this regard, our SMS course for pilots provides the flight crew with the necessary knowledge to become safe and efficient pilots in the operations of their aircraft, within a highly complex and evolving aviation environment. We teach safety policy, risk management, safety assurance, and safety culture, as it applies to their level of operation."

The first local area flight school who has partnered with Simflightronics in making the course available to its students and staff, is CDA - Professional Pilot Training Academy, located at Deland Airport, in Deland, Florida. Dave Alber, Sr., President and owner of CDA said that "We are very pleased to have the opportunity to offer the SMS course for our trainee pilots and flight instructors, in partnership with Simflightronics and Simulation Standards. We have always maintained a solid safety culture within our organization, and the addition of this course only enhances our commitment to safety."

CDA is a professional, FAA Approved, flight training organization, specializing in the training of domestic and international students, with a strong emphasis on professionalism and safety. They are dedicated to providing the highest quality and most complete flight training for pilots and flight crews as possible. All of their training programs are custom designed for the individual student.
